Questions?

Contact ISTA at phone: 77 32 33 50.

Get to know the signals

The smoke detector shows various signals, which informs you if an alarm has been given. Get to know the various signals, so you know what to do.

Situation	Signal	Meaning	What to do?
Normal	Red lamp flashes shortly approx. every ¼ min.	The smoke detector is in operation	Do nothing!
	The alarm makes 1 low beep approx. every ¼ min.	The battery is running low	Contact ISTA or your own janitor
	The red lamp flashes every 8 second		See below how to shut off the alarm
	The alarm makes 1 short beep approx. every ¼ min.	Technial error	Contact ISTA or your own janitor
	The red and the white lamps flash every 8 second		See below how to shut off the alarm
Test	The alarm makes 3 short, loud alarm tones	A test alarm has been generated	Do nothing! The alarm works perfectly. When the test is over the smoke detector will be working normally again
	The red and white lamps flash		
Alarm!!!	The alarm makes 3 short, very high alarm tones, which are repeated	The alarm has been activated because of serious smoke formation	Keep calm, make sure you and your family are safe and call for help
	The white lamp will light continuously		Read the advice in case of fire
	The red lamp will flash 3 times per each alarm sequence		
	The alarm is silent and the red lamp will flash quickly	This is a pre-alarm, caused by the smoke of cigarettes or food	Do nothing! However, be aware of the cause to the alarm
How to shut off alarms			
Smoke detectors can be shut off by pressing the center area of the smoke detector. This stops the alarm for approx. 10 min. and then it will automatically go back to normal situation.			

Good advice in case of fire

In case of fire every second counts. Stay calm, get you and your family out of the building and call for help.

1. Save yourself and other people from danger
2. Yell "fire" so that you alarm other people and they will manage to get out
3. When you are out of the building – stay outside the building. Do not enter any building on fire.
4. Call 112 for help and inform of:
 - a. What has happened?
 - b. Your phone No.
 - c. Where did this happen?
5. Stay on the scene until the fire brigade arrives, so that you can inform if there are any missing people in the building.

Safety for you and the ones you love

Congratulations! Your new fumonic 3 smoke detector increases the safety for you, your dear ones, and your neighbours significantly.

Remote monitoring of the most important functions

Fumonic 3 is the newest and most advanced smoke detector on the market. All the important functions of the smoke detector are monitored by ISTA. And on regular basis ISTA will test the smoke detector and make sure that it works optimal.

With the fumonic 3 smoke detector in your accommodation – you can feel nothing but safe!

Advantages when using fumonic 3 smoke detectors – in short

1. **24 hours monitoring makes sure that the smoke detector works**
The smoke detector is monitored. If the battery does not work, the smoke detector will be removed. If the smoke detector is subject to vandalism it is registered by the monitoring and the error will be repaired by ISTA.
2. **Regular tests increases the safety**
The smoke detector will also be tested regularly. In this way ISTA ensures that you have a maintained and well-functioning smoke detector. Among other things the smoke detector is tested if it has been subject to vandalism (attempts to dismount/manipulate it), any blockage. Manual tests can also be made.
3. **LED light with better orientation**
In case of an alarm the smoke detector will show a LED light, which penetrates the smoke and helps you orientate – even in a dark and smokey room.

Contact ISTA at phone No. 77 32 33 50 if you experience errors as regards your fumonic 3 smoke detector.
